GeoTest

Geospatial foundation models, one experimental framework

Data & modalities

data/datasets/

Split selection, paired inputs and labels

S1 | S2 | S1 + S2 | Sen1Floods11

Data preparation

transforms / normalization / statistics

Experiment setup

configs/ + utils.py

Build components; seed independent streams

YAML | Splits | Hyperparameters

Model components

encoders/ + adapters/ + heads/

Encoder, spatial adapter and task head

CROMA | TerraMind | Linear / FCN

GeoTest

run.py

Build / Train / Evaluate

Evaluation

src/evaluation/

Tiled inference, validation and held-out tests

mIoU | Per-class | AW / PW / FW*

Training

training/trainer.py

Loss, optimization and learning-rate schedule

Loss | Optimizer | Scheduler

Shared model interface

models/factory.py + DensePredictionModel

Run records

runs/<experiment>/<run_id>/

Configuration, provenance and results

Checkpoints | Metrics | Plots

Modular components | Validation-based checkpoint selection | One results folder per run

* Sen1Floods11-specific
